

WHITEPAPER

October 15

<https://goldenpig.gold/>

- Push blockchain to mainstream with layer-2 scaling technology.

- GOLDEN PIG launched the world's first Generalized State Channel Network and continues to push the frontier of layer2 scaling with advanced Rollup technology.

GOLDEN PIG

- **What GOLDEN PIG Applications can do ?**

- GOLDEN PIG Applications in this early stage of blockchain adoption are coming from the more obvious use cases that leverage features and functionalities of the blockchain technology, such as ICOs, DAOs, and betting applications (or gaming with betting features), along with infrastructure applications as needed like explorers, wallets, exchanges (centralized or decentralized).

• GOLDEN PIG will be built upon existing proven blockchain innovations and novel technologies that are created for achieving mass adoption.

- Token Name - GOLDEN PIG
- Token Symbol - GOLPIG
- Token Decimal - 18
- Token Supply - 100 Trillion
- Network - Binance Smart Chain
- Contract Address -
0xE1F94dD769523abcD9b6c24C88ABff607Ed93cc9

Roadmap

- January 25, 2022.

PancakeSwap Listing Community Airdrops

- January 30, 2022.

Initial CEX Listings Coimarketcap ,BitMEX LATOKEN ,
gate.io , kucoin , okex , bitmart (1GOLPIG =0,000001 \$)

- February15, 2022

Token Contract Release

- march 10,2022

Community Contests

- March , 2022

Ecosystem & Features Showcase.

- June 2022

Community Adoption & Partnerships Upcoming Refined

Smart Swapping & Yield Farming Upcoming Gift Dapp

- peer-to-peer

- It is often a safety practice that we code the target function of the target contract such that it can only be invoked by Executor. In this way, we are guaranteed that the action can only be executed after going through the process of on-chain governance. A good example of such a contract is the built-in contract Authority that manages Authority Masternodes

• Secure Network

- Block finality mechanism grants qualified blocks absolute safety guarantee. Once a block acquires its finality, the consensus will assure that it cannot be modified, replaced or removed from the public ledger even when the network encounters some extremely asynchronous situation such as being subject to large-scale network partitioning.

Team

The development team consists of professional and enthusiastic members in the blockchain field.
